| 0) | There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets exhausted. Given an integer array A of size N which consists of integer I and -I only representing ant's moves. | |
| 000 | | |
| en strong | Where I means ant moved unit distance towards the right side and -I means it moved unit distance towards the left .Your task is to find and return the integer value representing how many times the ant reaches back to original starting position. Note: | 5 |
| | Note: | |
| is to Ool of the State of the S | Assume I-based indexing Assume that the railing extends infinitely on the either sides | 0 |
| L. L. | Assume that the railing extends infinitely on the either sides Input Format: | |
